

Integrated Web Store for System i

Rapidly Build an Integrated Web Store

To compete effectively in today's marketplace, implementing a Web Store for your products is certainly high on the list to be able to realize the benefits of internet based sales. Integrating the Web Store into your System i applications is a critical part of that solution in order to reduce the amount of effort necessary to maintain the Web Store and to interact with your System i applications.

To assist our System i customers in implementing an effective and efficient Web Store, FusionWare Integration Corp. has worked to develop Web Store technology that integrates directly with your System i applications and data.

Our solution leverages open source, industry standard technologies and commodity systems and platforms, including Linux, Apache, MySQL, PHP and Web Services. Combine this with FusionWare's extensive industry and middleware experience and we can provide you with a solution at a fraction of the cost of a WebSphere/Global Services solution.

Capabilities of a FusionWare Web Store

Utilizing a Web Store developed by FusionWare Integration Corp. for your companies specific needs you can use the Web Store to:

- ✓ Call your RPG programs to process payments and do other tasks that require extensive integration with your LOB systems.
- ✓ Refresh product and inventory levels based on your System i application.
- ✓ Have purchases instantly update inventory levels in System i application.

The FusionWare Solution

- ✓ Distributes web processing off the System i to Linux.
- ✓ No need for expensive hardware upgrade to handle an increase in load.
- ✓ Use inexpensive commodity systems for web.
- ✓ Low administrative overhead.
- ✓ Low processing footprint.
- ✓ Can be provisioned onsite, or hosted.
- ✓ Fraction of the cost of WebSphere and Global Services based solution.
- ✓ Can be Virtualized
